Experimental Postal combines skill, timing, and luck into a single game. However, what makes Experimental Postal a truly unique experience is the fact that players are encouraged to combine three different elements to complete the game. The first is improvisation, as players can instantly create and destroy objects on their board. The second is strategy, as players rely on number crunching in combination with timings to utilize their pieces and reach goals. The third is gameplay, as players use instinct and a good sense of physics to read the board and create combinations that support their strategy. Players move their pieces to create a “postal jam” on the board, collect stamps, then race across the board to deliver a bundle of letters and return the stamps to the bank. Players earn stamps by connecting bundles of letters together or by tapping three different letters together, then holding them long enough for the stamps to accumulate. Once sufficient stamps are available, players can use the bank to purchase different goods, such as new characters or new gameplay elements. The game’s structure, unique to each player’s puzzle, and its emphasis on acquiring and utilizing stamps, make Experimental Postal the first mass-market ready study on creativity and improvisation.
